Dear Cspan - Brain Lamb.

Thank You for Cspan-

I feel that I can watch many hours of facts with out commentaries.

Brain I'm always interested in Book-notes. The back ground is so easy on the eyes, and the mind is able to concentrate on you and the author.

For the same reason I much prefer the former Washington Journal inter view studio with its green trees and partial capital building. It didnt cause too light much in the back ground or studio. It was straight forward and simple.

I find the new blue (although I love blue) to be too too bezy too light too distracting. It seems harder to watch or concentrate.

Sorry to write a critical letter when you have given me so much -

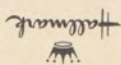

My nervous system made me do it!

Sincerely
