

THE BIG UMBRELLA

The Big Umbrella, or Mushroom, seen from Anderson, 50 miles distant. On May 22, 1915, after 3 days of mounting pressure, a column of vapor and dust rose more than 5 miles into the sky. This most spectacular of Lassen's individual eruptions was widely publicized as the "Mushroom Cloud" or "Great Hot Blast." Meyers Photo.

Dear C span

Thanks for the
Radio - It.

Great fun to see -
lets have more.
I enjoy see your programs.
