Gentlemen:

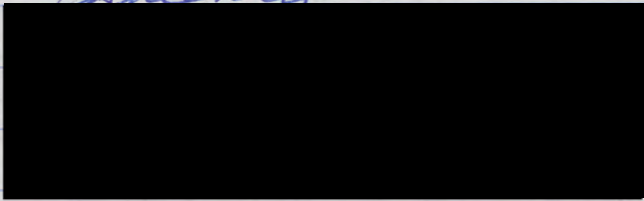

On the Washington Journal portion of your programming a request was made for suggestions for programming while the August recess is going on. I would like to suggest the following:

1. An analysis of the effects of the increase in taxes on Social Security up to 85% of benefits. I would particularly like to see how many are affected and whether there are truly the top 1% of earners as has been stated so many times.

2. A program on the way the Treasury "imputes" income and the factors that are used. (over)

If you can include these
suggestions in future programming,
I would appreciate your letting me
know when they are scheduled.

Sincerely

STE. GENEVIEVE, MO 63670
