Dear Mr. Lamb,

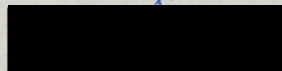

When the C-SPAN "school" bus comes to New Jersey in April, will you do a "Live from Bell Labs," like Penn & Teller did from Murray Hill, NJ? The Labs have traditionally done most of the research & development of communications equipment and, among other things, have invented the transistor, laser, and fiber optics. They also developed the first "portable" computer operating system - the UNIX[®] System. In addition, they have won 7 Nobel Prizes. The most recent one, in 1978, was awarded to Arno Penzias and Bob Wilson for their discovery of cosmic noise ("background" radiation measuring 3° Kelvin of heat) which was interpreted as evidence in favor of the Big Bang theory of the creation of the universe.

One of the best representatives of The Labs, and someone you may want to interview, is Arno Penzias. He is attractive, eloquent, and believes that someday all of our wireless communications needs will be met by a transceiver the size of a credit card. If you decide to stop at the Labs and would like any assistance navigating through the bureaucracy or geography I would be glad to be of any assistance. (over, please) →

On a personal note, my friends & I work for the
Network Wireless Systems Business Unit and would love to see
the C-SPAN bus with its Video cams & "switch" board, mobile
telephone(s), and on-board PCs.

Thank you for your time & attention.

Sincerely,

A black rectangular redaction box covering the signature.

Chatham, N.J. 07928
