I have heard and read about all the claims that have been made about "smoke and smoking" All these claims that have been made, are all lies! There is no correlation between smoke or smoking and any disease. These people and agencies that have made these claims have offer no evidence to substantiate their claims, except numbers, numbers do not prove anything except an amount. These doctor's and scientist who claim to have study and done research about the effects that smoking is suppose to have on people, they couldn't have done study and research on smoke or smoking.

What do they always give as an answer and it the same answer every time, their answer is "stop smoking" They want people to believe that stopping smoking, that it is a cure all for all kind of diseases.

2.

Why is their answer always the same, there are several reasons! One is their failure to find a cure for any of these diseases. Second is the huge salary these people receive, where else could they find a job, where no results have been produced. If they had to go to work in the private sector, they would have to produce results of some kind or they wouldn't have their jobs very long.

They have tried to link smoking to every kind of diseases under the sun. I am sure that these people are intelligent, but they fail to use the element that makes all intelligence work. That element is "common sense". without common sense, no intelligence will work! Instead of going to the source to find the answer, they have tried to use an object that is not an object ^{at} all, "smoke" smoke is not a substance. These people should have investigated the word or name given to a disease. And the name given to a disease which has been the most important disease is cancer. If they had given any thought to the word "cancer", they would have found

that the word cancer mean, that it's an abnormal, uncontrollable growth of living cells of living organisms. These two words, "LIVING ORGANISMS" are the most important words, that prove smoke or smoking does not cause any of the diseases, that these people have made claims about. Either these people were stupid or lack the common sense to understand that smoke is not a substance, and not being a substance, it does not have any living cells of living organisms, therefore can not cause any kind of disease. These 3 words is a make up of cancer, matter, material and substance. And smoke not being a substance, certainly can not be the other. Now why is this so hard for people of intelligence to understand?

There was a very good article put out by the Associated Press, called "Smart Bomb" which proves my theory about smoke and smoking. It says researchers experimenting with lab animals say they have developed a medical "smart bomb" that seeks out cancer and then unleashes a chemical to kill the tumor cells.

That what these researchers did was to realize that to stop the cancer from growing and spreading was to kill the living cancer cells. And this goes to prove that "smoke or smoking," can not be the cause of any kind of diseases.

This article came out a day after I had come to the conclusion that smoke was not a substance. It takes a long time to investigate and think these things out.

Here is another issue that it not only takes intelligence but has to have the common sense to go along with it to make things work. And that is running the government. The people talk about no more tax increases, but yet they want more wages. They also want the government to cut programs do away with others. They also want better services. There is no question that there is a huge amount of waste. But even with all the waste cut out, the government would have to have more taxes each year to operate. It is only common sense that when taxes go up, prices have to go up 3 or 4 times more than wages.

The employer has to make enough money to pay the people working for him, plus the overhead cost, plus his own keep. What also the people don't realize is that the tax money almost all come back to them in some form or other.

People are saying enough, well enough means one thing, a freeze has to be put in place, this stops everything. This would be what they are asking for, "enough". But this could only work with a freeze on wages too. This would allow everything to remain as is, The loan could be paid off as there wouldn't be any increase in the interest. Another thing would be to cut foreign aid. I know they all say it's to our best interest. This isn't true at all, we never know what is going to happen in these countries, day from day. Then when the budget and deficit are under control, you still going to have to control wages and prices, because if you didn't, everything would come back to the way they are now. The people wouldn't like this, but it the only common sense thing to do.

If people knew that this takes and interest

rates wouldn't go up, more people would start a business,
 this would create more jobs and people would buy more
 because the prices of things wouldn't be out of their reach.
 It's not wrong for people to get rich, but it has to be
 done at a much slower pace. We can't have this class
 culture going on. Where one class can have everything
 they want, while the other class can have nothing.
 The wealth of our country has to be shared by everyone.
 They say this is the land of the free and everyone
 is equal, Not true, the people locked in poverty are
 not free. They don't have freedom nor the equality
 of others, they don't have the freedom to choose what they
 want to eat, the clothes they wear, nor the places they
 want to go. No this is far from being the land of
 freedom or equality for everyone. And the people don't
 have the common sense to understand, that they are
 the cause of their own problems, not the government,
 for they are the government.

I like to see a discussion Sincerely
 about smoke and smoking
 with this letter use to ask the questions.
