444 North Capitol Street N.W.
Washington, D.C. 20001

Dear Sirs:

My eyeballs are glued to C-Span and
C-Span II.

The greatest source of "entertainment"
produced for transmission over a cable.

A question:

The reporters, I presume for the Media
use a plastic "muzzle" which contains
the microphone. No doubt the
container contains sound-deadening
material.

I'm a Amateur Radio Operator and
the only time I am able to use my
radio is at night and my overly-hefty
voice disturbs other people.

Can you tell me about the above "voice -
stopper"?

Many thanks,
